Abstract

Mental state image, including its phenomenological nature, structural organization, temporal-duration dependent (attributed) dynamics, linkages with personality features etc. has been examined. The studies show that subjective identification of mental state images persists in the process of time spans variation. Eternal structures of mental state image that contribute to temporal consistency of the state's image (its character) were discovered. As it was revealed, specific features of mental state images within the temporal continuum "past-present-future" depend on the level of mental activity, mode of the mental state and individual's traits.
